

## *CARE OF YOUR SPINNING WHEEL*

Please treat this spinning wheel as you would a piece of furniture. Keep away from intense heat or damp.

If the wheel is already polished you should keep it looking bright and clean with furniture wax.

If you bought it in natural wood to finish yourself, then a clear lacquer should be applied. Rub it down with fine sandpaper and clean off all dust, then apply a second coat. If you require a darker finish then apply a stain before the lacquer.

### *OIL*

1. The ends of the flyer and inside the shaft where the bobbin runs should be lightly oiled.
  2. The pedal pins oiled occasionally.
- N.B. The wheel bearings do NOT require oil.
